

Echoview

Products and purchasing

Echoview's licensing offers access to a wide range of functionality via different modules, giving you the flexibility to only license what you need and to add more capability later if required.

Echoview's module diagram

Prior to any license purchase our sales team will discuss your data processing requirements and analysis goals to help you to determine the modules you require. If you would like to trial the software prior to purchase, evaluation licenses are available on request.

To initiate the purchase of an Echoview product, please request a quotation from us or an authorised reseller so we can provide you with the best price appropriate to your needs. Once the quotation is accepted, provide us with one of the following:

- A signed copy of the quotation
- A complete credit card payment form (note: we only accept credit card payments in AUD and USD)
- An official purchase order referencing the quotation

We will then provide you with an invoice and a range of payment options.

When purchased, an Echoview license is delivered via a USB dongle. One dongle is supplied per license, and the dongle can be used on as many computers as you wish, but can only be used on one computer at a time.

Standard licenses

New licenses include one year of maintenance and technical support (MATS). Further years can be purchased on request.

Any Echoview updates or changes to a license (e.g. the addition of a module) can be found and activated by running Echoview, clicking on the Help menu, selecting Check For Updates, and following the prompts therein.

Maintenance and Technical Support (MATS)

For access to the latest version of Echoview and technical support you need a current MATS subscription. This provides you with instant access to any new Echoview releases plus help from our experienced technical support team.

To help you keep up-to-date with your MATS, you will hear from us prior to the end of your MATS subscription period with an invitation to renew.

Upgrades

If your license does not have a current MATS subscription, but you wish to use the latest version of Echoview, you can purchase an upgrade. Note that this option is more costly than maintaining an up-to-date MATS subscription, and does not include access to our technical support services.

The benefits of using the latest version of Echoview

Hydroacoustic science and technology is continually evolving, and so is Echoview. New versions of Echoview are released every year, which bring not only new features and capabilities but also improvements in performance and ease of use.

Staying up-to-date with the latest version of Echoview enables you to keep pace with these improvements, not to mention the latest developments in computer hardware and software that can significantly ease the burden of processing increasingly-large datasets.

Products and purchasing

Leases

Echoview leases are available to clients undertaking short-term projects, consulting jobs or who otherwise require access to an Echoview license for a defined period of time.

Student licenses

At the sole discretion of Echoview Software, a student license of Echoview may be provided for use by a pre-doctoral student.

An Echoview student license is for use by the named student only, is provided only for work directly related to the student's study or thesis, and must not be used for commercial work. The student license is supplied as a software lease for one year from the date of purchase, and is enabled via a timed USB dongle which includes access to all Echoview modules.

Echoview training courses

Echoview training courses will provide you with an introduction to hydroacoustic theory as well as the skills to understand your acoustic data and process it efficiently using Echoview.

Courses are offered globally, and are tailored to best suit your level of experience and particular learning requirements. Our latest training course dates and registration details can be found on the Echoview website.

Consulting and other services

Echoview Software has a team of experienced professionals able to assist you with your hydroacoustic data processing or fisheries project.

Echoview also offers the option of sponsored software development. If you require a specific new feature in the software, help with automation, or support for a new type of data, we can negotiate a fee for the development costs to provide you with the required capability in a specified time frame.

Echoview technical support

Our experienced support team is available to assist with any questions or queries you may have regarding Echoview or your hydroacoustic data. We have a wealth of knowledge not only of Echoview itself but of a wide range of hydroacoustic-related subjects. Our technical support team is on hand to help you

with Echoview, and our comprehensive help file provides full documentation on Echoview's features and use.

Our clients regularly report that our support services and help file make a genuinely beneficial difference in their ability to process their hydroacoustic data effectively and efficiently.
